## What Research Tells Us About Autism Treatment

Major Findings of the National Standards Project

Late in 2009, the National Autism Center announced the completion of the National Standards Project. The primary goal of this multi-year Project was to provide critical information about which treatments have been shown to be effective for individuals with autism spectrum disorders (ASD). The resulting National Standards Report is the most comprehensive analysis of ASD treatments ever published. In this presentation, Dr. Susan Wilczynski will share the major findings of the National Standards Project.
